

What have we been learning?

Week beginning: 19th January 2026

In maths this week we have been learning about capacity. We have been using the words full, empty, nearly full, and nearly empty. We have been practising pouring the right amount of water into our containers. We have also been comparing containers, predicting which one would hold the most, and which one would hold the least. We then used a jug to measure how many jugs of water each container holds so that we could find out the answer.

How can you help your child with their learning?

- Help your child to add 2 small groups of objects together (e.g $1+1=2$, $3+1=4$). For example – I have 3 pebbles here, and 2 pebbles here, how many pebbles do I have altogether? Show them that if you count all of these objects, they have 5 altogether. Ask them 'How can I make 4? How can I make 5?'
- Please ensure your child arrives at school before 9am. Our gate is open from 8:40am for early morning work. If your child arrives after 9am, they miss part of their reading lesson, which unsettles them. Reading is their most important lesson of the day. Thank you for your help with this.
